## Wellness for your plants in soil

# TerraComfort®

The ideal longterm watering system

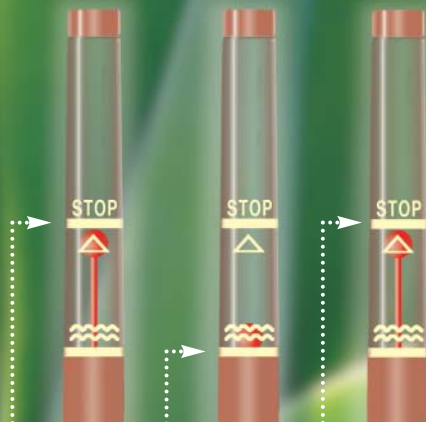

## Wellness for your plants in soil

Are you frequently away from home and have only little time for your indoor-plants? If this is the case, **TerraComfort®** is the right product for you. Thanks to a large water-supply in the outer pot frequent watering of the plants is not necessary. The water-level indicator shows when the plants have to be watered and how much water is needed.

Always pour the water into the shaft provided for watering which is next to the water level indicator. Don't water the rootball. Then it is guaranteed that the plants have an optimal water-supply and the aeration of the rootball is good.

Matching the **TerraComfort®** plants LENI offers a wide range of water-proof, high-quality ceramic pots.

## Watering? One glance is enough.

1. Water to **STOP**.
2. Let the water level go down to the **white line**.
3. Then water again to **STOP**.

## Fertilize on a regular basis:

Plants require nutrients to grow and blossom. **BLUSANA** Liquid Fertilizer provides all the important nutrients and trace elements for your indoor plants. Just add the fertilizer on a regular basis (every two weeks) to the water as described in the directions. That's it.
